

Fact sheet 3

Flush toilet with onsite treatment in twin pits

Summary

This fact sheet describes a flush toilet system with onsite treatment in twin pits. The system consists of a toilet structure, a pipe with a valve, and a twin pit system. The toilet structure is used for defecation, and the pipe with a valve is used to flush the waste into the twin pits. The twin pits are used for the onsite treatment of the waste. The system is suitable for areas with limited access to water and electricity.

Applicability

This system is applicable in areas with limited access to water and electricity. It is suitable for areas with high population density and limited land availability. The system is also suitable for areas with high water table and limited access to water.
